

**Software Engineer-Full Time**  
*New Position/Terrific Opportunity!*

An environmental, air quality consulting company located in Petaluma is seeking a software professional to support software development for both client projects and internal assignments.

**Key development skills desired are:**

- Java
- Experience with modern, dynamic languages such as Python, Ruby, or JavaScript
- Familiarity with XML and web services

**Additional preferred skills include:**

- C development
- Linux experience
- GIS knowledge or experience with ArcGIS tools

AS or BS degree in Computer Science or the equivalent engineering degree or up to four years experience performing software development is necessary. Our optimal candidate is entry level with an eagerness and ability to learn a broad range of software and technologies. A good work ethic, effective verbal and written communication skills and the ability to meet constant deadlines are all necessary. This casual work environment supports collaboration, intellectual stimulation and an opportunity to learn something new every day.
