

## Website Programming for RayStedman.org Ministries

[www.RayStedman.org](http://www.RayStedman.org) is a website that houses a library of material created by Ray Stedman while he was a pastor at a church in the Bay Area. The library contains over 10K pages of content, 36 online books in English, 17 online books in foreign languages, 2K audio/video files and more. We are creating a new website to house this material and we need your help! You will be involved in the creation of the new website starting from the ground floor of the project.

### Required Skills:

- The Desire to Learn and the Motivation to Make Elements of the Project Come to Life
- The Ability to Parse Text Files and Convert them to Different Text Formats. This will help us Move the Content of the Existing Website to the New One.
- You should have a Strong Understanding of Computer Science Concepts.
- Languages in Decreasing Priority: HTML, PHP, CSS and JavaScript

### Helpful Skills:

The New Website is being Created in the Following Environment:

- Drupal Content Management System
- MySQL Database
- Linux Server with Shell Scripting in PHP

Please Consider these areas as Opportunities to Learn if you are Not Familiar with them today.

Does reading this description sound interesting to you? If so, please take a few minutes to look at the existing website to get a feel for the type of content you will be working with. We will work together at a location close to Sonoma State University beginning with 8 hours per week. This opportunity could become an internship towards your graduation requirements at SSU for the correct person. Please send an email to [greg@RayStedman.org](mailto:greg@RayStedman.org) and let me know why you are the perfect person for the job.

Thanks! Greg Sims
