

# Software Co-op/Intern

---

myLinkx is an innovative Santa Rosa, CA based software start-up focused solely on mobile collaborative software solutions for small to medium size businesses. Real time input provides for efficient management of time and resources. Software has a strong emphasis on productivity and information sharing across the business organization. The software can be easily adapted to any business model and system platform.

We are looking for technically strong and motivated co-op and interns. As a co-op or intern you will be working on projects to extend or improve functionality. You will be assigned a project which could touch various aspects of our software product from mobile device programs to linux based reporting tools and data syncing tools. You will be working with the latest technologies out there which could range from Ajax based widgets or cloud computing components.

## Responsibilities:

- \* Work on projects to improve and add functionality to the current solution
- \* Design, build and own small software projects
- \* Automate testing of software

## Requirements:

- \* Knowledge of a scripting language like Javascript, PHP, Ruby etc.
- \* Knowledge of databases and their concepts.
- \* Comfortable with a Linux based development environment including basic shell scripting
- \* Knowledge of web applications and their stack
- \* Strong technical aptitude
- \* Excellent written and verbal communication skills

## Preferred:

- \* Experience with Ruby, ROR and MySQL
- \* Experience designing User Interfaces
- \* Experience with core languages like C/C++/Java
